

Getting setup -- Installing Docker

Linux / Ubuntu install docs

<https://docs.docker.com/install/linux/docker-ce/ubuntu/>

Docker CE vs EE

<https://nickjanetakis.com/blog/docker-community-edition-vs-enterprise-edition-and-their-release-cycle>

Install curl, so we can install Docker

```
sudo apt-get update && sudo apt-get install curl
```

Install the latest version of Docker on xubuntu / Ubuntu 18.04

```
curl -fsSL https://get.docker.com -o get-docker.sh \  
  && sh get-docker.sh && rm get-docker.sh
```

Add your user to the docker group so you can run Docker without root

```
sudo usermod -aG docker your-user-name
```

[you must completely log out of the xubuntu VM before proceeding]
