Staging server -- Installing Docker

All commands should be run from the staging server unless noted otherwise.

Open a terminal in xubuntu and SSH into the staging server
```
ssh you@192.168.1.99
<Replace you with your username, or omit this if it's the same>
<Replace 192.168.1.99 with your server's IP if it is different>
```

Install curl, so we can install Docker
```
sudo apt-get update && sudo apt-get install curl
```

Install the latest version of Docker on Debian based systems
```
curl -fsSL https://get.docker.com -o get-docker.sh \
  && sh get-docker.sh && rm get-docker.sh
```

Add your user to the docker group so you can run Docker without root
```
sudo usermod -aG docker your-user-name
```

```
[close out the SSH session by running exit or hitting CTRL+D]
```

Verify Docker works and it's accessible without root
```
docker info
```
